

DELAY IN TRANSIT

CONTROL YOUR FLOW, OPTIMIZE COSTS

In today's market, you need utmost flexibility to ensure your supply chain easily adapts to changing conditions.

With our Delay in Transit (DIT) solution, you can request temporary retention of your goods at a dedicated port/hub until your customer is ready for the cargo to continue to the POD. This enables you to control storage costs.

EXPERIENCE THE BENEFITS:

Get your cargo closer to its destination.

Choose your arrival dates.

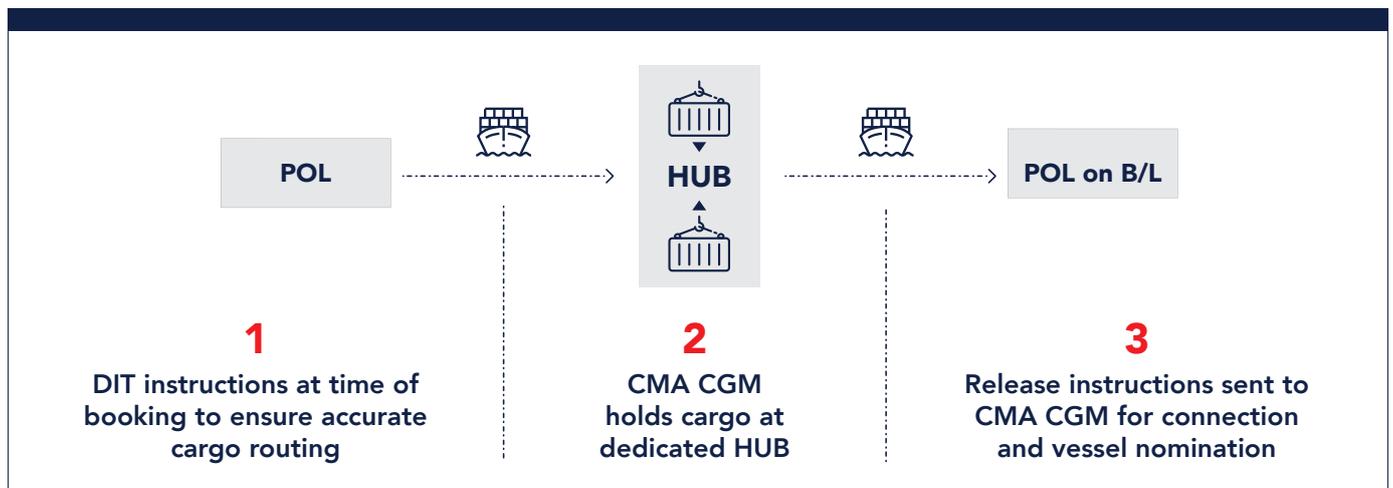

Avoid unexpected costs (warehousing, detention and demurrage, etc.).

Be more flexible.

HOW DOES IT WORK?

GET STARTED

- Simply make your request in writing at the time of booking. Containers must be on one B/L with one shipper, one consignee and one POD. B/L quantities may not be split.
- After review and approval, CMA CGM will hold the container(s) at a relay port of your choosing. The extension of stay can be at any of the shipment points other than the port of loading and final destination.

Please refer to the Terms & Conditions for more information.
